BRIEF

- Results-driven Senior Embedded Software Engineer with over 5 years of experience specializing in automotive infotainment and camera systems.
- Strong expertise in C++ development on QNX and Android AOSP, including camera framework, real-time frame rendering with OpenGL, HMI using Qt/QML, and middleware on embedded Linux. Proficient in Java and Kotlin for Android framework customization and plugin development.
- Actively leverage AI-powered development tools (GitHub Copilot, Cursor, etc.) to accelerate code generation, refactoring, and automated testing, while maintaining strong code quality and architectural control. Experienced in full software lifecycle: requirement analysis, architecture design, implementation, code review, and collaboration with international teams.

SKILLS

- **Programming Languages:**

  C++ (Advanced), Java (Good), Kotlin (Good), JavaScript (MODERATE)

- **Frameworks & Technologies** Qt/QML, Node.js, WebSocket, OpenGL, libevc (Camera Library), Robot Framework, Android Framework (Camera2 API, Camera HAL, SurfaceFlinger, AOSP.

- **Tools & Methodologies**

  Git, Jira, CANoe, CMake, Gerrit, Jenkins,Linux System Programming, Agile/ Scrum

- **Platforms:**

  QNX RTOS, Android AOSP, Embedded Linux.

EDUCATION

QUOC HOC HUE HIGH SCHOOL FOR THE GIFTED

Major: Physics

DA NANG UNIVERSITY OF SCIENCE AND TECHNOLOGY - Bachelor

Major: Industrial infomatics (2015-2020) GPA: 3.0 / 4.0

CERTIFICATIONS

French DELF B1.

TOEIC 600.

Scrum master I.

EXPERIENCE

VIETNAM SOLAR POWER EPC CORPORATION — *Intern*
March 2020 – August 2020

-Designed and developed a SCADA system HMI for solar power plants, displaying real-time inverter information and system status.

-Utilized C++, LabVIEW, and SQL to create a reliable monitoring interface.

INTERESTS

Traveling, Football, Guitar, Photograph

LG ELECTRONICS - VEHICLE COMPONENT SOLUTIONS DEVELOPMENT CENTER VIETNAM - *Senior Embedded Software Engineer*
October 2020 – Present

HMI Development for Automotive Infotainment — October 2020 – July 2021

- Developed HMI applications (including Seat control, Climate control, and other cockpit features) using Qt/QML on embedded Linux.

- Implemented communication services between HMI and other in-vehicle clusters using CAN and SOME/IP protocols.

- Worked closely with foreign customers and third-party suppliers to ensure smooth integration and requirement fulfillment.

WebApp Platform for In-Vehicle Infotainment — July 2021 – March 2023

- Designed and developed WebApp Lifecycle Manager and integrated Node.js engine into embedded Linux-based infotainment systems.

- Performed customer requirement analysis, feature architecture design, middleware development, and code reviews in collaboration with senior engineers.

Camera Framework & Android Plugin Service — March 2023 – Dec 2024

- Led development of Screen Share plugin service and Android camera framework for in-vehicle infotainment systems.

- Customized Android AOSP, updated Android API versions, and worked with Camera2 API, Camera HAL, SurfaceFlinger, and camera service layers.

- Performed customer requirement analysis, architecture design, implementation, code review, and provided technical clarification to customers, vendors, and third-party partners.

Camera Framework Development (QNX) — Jan 2025 – now

- Developed early-stage camera framework for next-generation automotive platforms on QNX.

- Worked extensively with Libevc camera library to handle camera data acquisition and processing.

- Designed and implemented real-time frame drawing and rendering pipeline using OpenGL, ensuring smooth, low-latency video display for surround-view and driver monitoring systems.

- Built a fully automated end-to-end testing system using Robot Framework, significantly improving repeatability, and regression testing efficiency.
